

TERRA VERA NUTRIENTS MAY INCREASE NATURAL DEFENSE AGAINST ENVIRONMENTAL STRESS

Terra Vera's activated amino acid nutrients can be used from propagation to post-harvest.

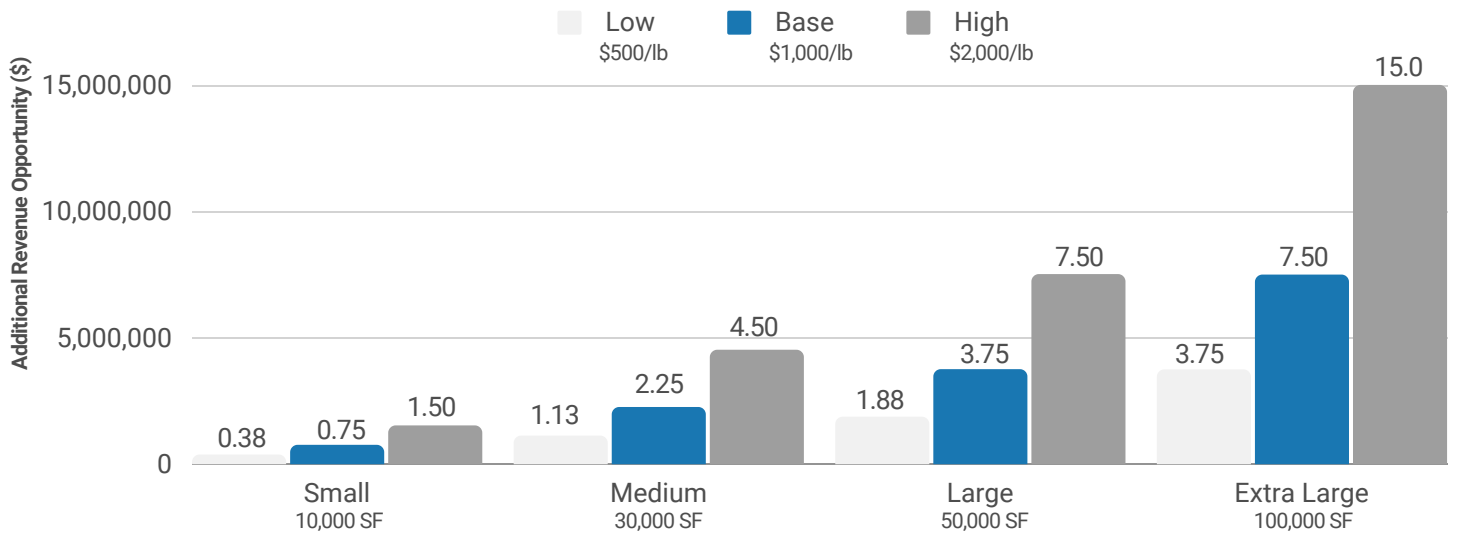

Studies show that foliar feeding with Terra Vera nutrients in flowering/bloom stage resulted in a **100% pass rate** in post-harvest microbial testing (<10,000 CFU/g) samples.

Before adopting Terra Vera as a flowering/bloom nutrient, 15% of samples failed compliance testing and could not be sold to consumers.

DATA PROVIDES INSIGHTS INTO ADDITIONAL REVENUE OPPORTUNITY

Plants often do not have the proper nutrition to activate their natural defense mechanisms against abiotic and pathogen stress. By increasing the product pass rate from 85% to 99%, operators may recapture millions of dollars of revenue potential.

Designed to maximize uptake, Terra Vera's nutrients promote a positive impact on the environment and a positive return on investment. Terra Vera provides operators a reliable nutrient alternative for improving yield potential and crop quality while minimizing waste during critical growth periods. **Are you ready to grow smart from the start?**
